## Wirquin expands wet room floor trap options

Wirquin UK has strengthened its wet room offering with Venisio Square floor trap for walk-in showers. This new option complements the Linear version launched in 2009.

Venisio Square is now available in three different variations. The Complete kit includes everything in one box (pictured); the To Tile version is the same as Complete but features a tile recess instead of a grid. The Choice option enables customers to choose from three design grids, one of which is lockable.

All versions of Venisio Square are supplied with 750 x 750mm waterproof sealing sheet and offer a high flow rate of up to 57l/min. They come with a 5-year guarantee and all options are height adjustable and feature a 50 mm water seal.

Venisio is available ex stock via APK, AWA Bathrooms, JSB Synergy and Mark Vitow Limited.

## New Greenwich Slipper bath from B.C. Sanitan

The Greenwich Slipper Bath is an elegant addition to B.C Sanitan's already extensive traditional bath collection. It offers the ultimate in relaxation, a veritable hotel style bath perfect for many applications.

Available with or without a skirt, (seen here) the Greenwich can be transformed from a roll top with ball and claw feet, to a transitional design that would fit into a multitude of homes and bathroom designs.

Offering total flexibility, the

Greenwich Slipper bath is offered in 140 colours, delivered to each customer ready finished. Measuring 1555mm x 810mm and offered with no tap holes, the bath is made from acrylic and finished with a gel coat. Prices start from £1,226 including VAT.

## Introducing the Triflow Quadro

**Renowned for its unrivalled innovation ethos and engineering excellence, Triflow Concepts continues to successfully integrate the functionality needs of the modern consumer while delivering a sleek and minimalist aesthetic.**

With the introduction of the Triflow Quadro System, Triflow Concepts expands on its patented Triflow technology—known for delivering hot, cold and filtered water through a

dedicated waterway within one spout—and introduces the convenience factor with the addition of instant hot, filtered water heated to 98°C.

The segregated waterway for the filtered water addresses all safety concerns: cross-contamination is prevented, the spout remains cool to the touch, and the spring child lock safety feature ensures the hot filtered water is only activated with intent.

The Quadro system is available in a range of cutting edge designs in a mechanical, three lever version and an electronic version in which hot and cold water are activated at the touch of a button. The electronic models include the award-winning Zaha Hadid tap.

The Triflow Quadro partners an exclusively designed, ventilated heater tank with the Triflow System, all built into one small unit under the worktop. The tank is not pressurised so any danger associated with a pressurised system is eliminated. Unlike a conventional kettle, the hot water is heated continuously as it is used and can deliver up to 25 litres of near-boiling water per hour.
