TRIFLOW CONCEPTS BACK TO TAP

Fusing elegance and style with technological innovation, the Triflow Quadro System has been designed to evolve and simplify the way in which we hydrate. The Triflow Quadro System is the world's first tap dispensing not only hot and cold water but filtered hot and cold water through a dedicated waterway, from the same spout. This has been one of the most significant changes to the industry and remains unchallenged.

Back to Tap with Triflow Concepts

Intrinsically British and respected the world over for harnessing innovation and engineering excellence, Triflow Concepts launched two new ranges of products in 2010: the Triflow Quadro System, a revolutionary 4-way water-delivery system and the Triflask, a portable and sleek water flask.

The Triflow Quadro System

Triflow Concepts expands on its patented Triflow technology, delivering not only hot, cold but also filtered water through a dedicated waterway within one spout — and introduces the convenience factor with the addition of instant hot, filtered water heated to 98°C. Through the use of a segregated waterway for the filtered water, the Triflow Quadro

The Triflask

System addresses all safety concerns: cross-contamination is successfully blocked, the spout remains cool to the touch, and the spring child lock safety feature ensures the hot filtered water is only activated with intent.

The Triflow Quadro System comes in a range of electronic as well as mechanical designs, including the award-winning Zaha Hadid version with electronic button. Most models are available in a broad range of finishes from black nickel to matt gold.

The Triflask

Joining the ranks of the Triflow Quadro System, Triflow Concepts introduces the perfect accessory: the Triflask. This reusable drinking flask is composed of BPA-free copolyester which is impact resistant, durable, dishwasher safe and presents none of the health dangers associated with plastic bottles. The new design features a screw top lid that instantly opens with a monopusher button on the front of the lid.

The Triflask is the must-have accessory for the Urban Environmentalist looking for healthy hydration on the go.

Back to Tap

With ever-increasing production and transportation costs associated with the consumption of disposable drinks bottles and landfills nearing maximum capacity, Triflow Concepts encourages a healthy and sustainable hydration solution with minimal carbon footprint. The core products give consumers the opportunity to go Back to Tap without compromising on style, convenience or water quality. Combined with the Triflow Quadro System, consumers can now enjoy great tasting water on the go. The high performance Swiss-made ceramic filter cartridge leaves all beneficial minerals such as calcium, magnesium and fluoride intact, while eliminating the harmful chemicals and bacteria found in ordinary tap water.
