BATHROOM & KITCHEN UPDATE

## Triflow Concepts builds on its green credentials with the arrival of the Triflow Quadro System

a new range of taps with built-in system to deliver filtered, hot and cold in addition to regular hot and cold water

**I**ntrinsically British and respected the world over for harnessing innovative design, Triflow Concepts launches a new tap that will make separate filtration taps as well as kettles a thing of the past.

Renowned for its unrivalled innovation ethos and engineering excellence—as evidenced by the Zaha Hadid designed tap launched last year—Triflow Concepts has integrated the functionality needs of the consumer into the Quadro, delivering filtered water at 98°C in an instant. The Quadro is designed with convenience as well as the environment in mind.

The Triflow Quadro System is partnered with the new easy to install Heater Tank, which incorporates a high performance Swiss-made filter. The 2.5 litre non-pressurised tank is highly efficient and capable of delivering 25 litres of hot filtered water per hour at a cost of just 0.6p per cup. The front display of the housing contains an LED panel which indicates the

filter cartridge's lifespan and shows when the filter needs to be changed. No tooling is required to change the cartridges as the easy to open locking ring ejects the filter system casing to release the filter cartridge.

With ever-increasing production and transportation costs associated with the consumption of disposable drinks bottles and landfills nearing maximum capacity, the Quadro provides a healthy and sustainable hydration solution with minimal carbon footprint. Thanks to the Triflow Quadro System, consumers can now enjoy great tasting, hot and cold water without the chemicals found in ordinary tap water and all the beneficial minerals such as calcium and fluoride left intact.
