Roca Presents 'The Wave'

100% Design sees another new and innovative stand display from Roca to coincide with the launch of the 4th edition of Jump The Gap.

On Stand G40, Roca will be presenting "The Wave" a 15m kinetic light installation consisting of 40 motor controlled hanging rods with integrated LED lighting. The rods hang horizontally and are synchronized to move in a coordinated fashion like ripples and waves.

Roca, together with BCD, the Barcelona Design Centre will also be launching its 4th International Design Competition - Jump the Gap - with 100% Design marking the start date for applications.

The competition offers talented designers across the world the opportunity to showcase work based on innovation and design within the bathroom area. The winning project will receive a prize of 5000 Euros which will be presented at 100% Design 2011.

Triflow Concepts: a true UK manufacturing success story

Intrinsically British and respected the world over for harnessing innovative design talent Triflow Concepts is launching an eagerly-awaited new range of products at 100% Design. The Triflow Quadro System is a revolutionary 4-way water delivery system supplying not only hot and cold water but filtered hot and cold water through a dedicated waterway, from the same spout.

www.dabsmagazine.co.uk

Triflow Concepts invented the Triflow in 1991, a patented system that delivers hot and cold as well as filtered water through a dedicated tube in the spout, a system that ensures the filtered water is not re-contaminated by regular tap water. This patented point of use water treatment system remains unchallenged and provides the solution to our increasing concerns about our drinking water. It incorporates the highest quality, Swiss made Katadyn ceramic filter. The cartridge is made from sintered diatomaceous earth and has a micro porous structure impregnated with silver which is known for its bactericidal action. The pore size is able to eliminate particles down to 0.2 microns (0.0002 mm) in size. This is the highest performing ceramic filter available in the market today. One pound of carbon contains a surface area of roughly 125 acres and can absorb literally thousands of different chemicals. Activated carbon is carbon which has a slight electro-positive charge added to it, making it even more effective in eliminating chemicals and impurities. As the water passes over the positively charged carbon surface, the negative ions of the contaminants are drawn to the surface of the carbon granules.

The cartridge significantly reduces harmful substances such as chemical and biological contaminants as well as most heavy metals and particles as small as 0.2 microns, while leaving untouched beneficial minerals such as fluoride, magnesium and calcium.

The latest innovation by Triflow Concepts is the Quadro System. This appliance partners an exclusively designed, ventilated, heater tank with our Triflow system, all built into one small unit under the work top. The tank heats your water to 98°C and the water is released as a stream of hot water rather than steam. The tank is not pressurised so any danger associated with a pressurised system is eliminated. Unlike a conventional kettle, the hot water is heated continuously as it is used and can deliver up to 25 litres of near-boiling water per hour. This point-of-use system eliminates the need for both bottled water and a kettle.

Triflow products can be found in the bathrooms of the world's most discerning hotels including Browns, Mayfair, The Berkeley and Langham Hotel.
