Trees

We wanted to create a tap that did not look like a tap, to create a piece that was functional, but beautiful and that would be a feature as opposed to a necessity.

Trees consists of three skew cylinder, their function subtle. Trees could be manufactured in different scales, configurations and finishes for either bathroom or kitchen use. Trees could be manufactured to have either fixed or moveable joints.

TRIFLOW CONCEPTS LTD ANNOUNCES 2010 TRIFLOW FUTURE TALENTS DESIGN COMPETITION IN ASSOCIATION WITH 100% DESIGN

Launched in 2009, Triflow Future Talents is a competition which aims to encourage young designers to design a new kitchen or bathroom product.

As manufacturer of the first three way tap which delivers hot, cold and purified water through a dedicated tube in the same spout, we value innovative engineering design. The Triflow Future Talents competition is an opportunity to build upon our own expertise and support emerging design talent.

At Triflow Concepts we have invested in our products as well as manufacturing facilities to ensure they are ecologically sound. This year Triflow Concepts launched the Back To Tap campaign to encourage consumers to substitute environmentally damaging bottled water with refined tap water to reduce carbon emission levels. To coincide with the Back To Tap campaign we have produced a re-useable flask in copolyester,

a material that has none of the health risks associated with other materials such as plastic and aluminum.

The 2009 Triflow Future Talent competition was a resounding success, attracting over 80 entries which were judged by a panel of eminent experts comprising British architect Zaha Hadid, interior designer David Collins, Editor-in-chief of Wallpaper magazine, Tony Chambers and The Times magazine design columnist, Caroline Roux.

The designs of the runners-up were displayed at the 100% Design London exhibition, Triflow Future Talents was won by John Walsh, who is currently collaborating with Triflow Concepts to bring his winning design to fruition. Following the success of last year's contest, Triflow Future Talents is set to become an annual event.

The Triflow Future Talents Competition, run as an opportunity

for Triflow Concepts to support emerging British talent, is seeking submissions of designs for a pioneering new kitchen or bathroom tap or accessory.

We are currently in the process of composing a prestigious judging panel. Confirmed judges include; Tord Boontje, Design and Head of Design at the RCA, Geoff Crook, Course Director at St. Martin's College, Zaha Hadid Architects and the soon to be elected President of the RIBA.

Designers may apply on our website: www.triflowconcepts.com. The deadline for all entries is 30 August. The final shortlisted designs will be exhibited at The Triflow Concepts stand (B20) at 100% Design and open to the public to vote for a winner. The winning design will be announced on the final day of 100% Design and will see their creation be taken into production.
