Triflow concepts to showcase Quadro System and Triflask at 100% Design

UK-based Triflow Concepts will unveil Triflow Quadro System, a new range of taps at the 100% Design exhibition in London.

Triflow Quadro System is a four-way water-delivery system available in a broad range of colours. The product draws on its patented Triflow technology known for delivering hot, cold and filtered water through a dedicated waterway within one spout and introducing the convenience factor with the addition of instant hot and filtered water heated to 98°C. Through the use of a segregated waterway for filtered water, the Triflow Quadro System addresses all safety concerns by blocking out cross-contamination and keeping the spout cool to touch. In addition, the spring child lock safety feature ensures that the hot filtered water is only activated when the lock is released.

The Quadro System is available in a range of cutting edge designs but will also be available in a number of existing Triflow taps including the award-winning Zaha Hadid version. It would be available in finishes ranging from white, brushed and black chrome to matte gold, from October 2010. It will retail from GBP2,250 (\$3542.8).

100% Design is a contemporary design exhibition, which will be held from September 23-26, 2010 at Earls Court, London.
