Flowing Innovation

Design excellence, commitment to the environment, and UK manufacturing available on-tap in every home; Triflow introduces the Quadro System.

Intrinsically British and respected the world over for harnessing innovative design talent, Triflow Concepts is proud to launch the Triflow Quadro System, a revolutionary 4-way water-delivery system.

Already renowned for their unrivalled innovation ethos and engineering excellence, Triflow Concepts continues to successfully integrate the functionality needs of the modern consumer whilst delivering within a contemporary design, an ecologically sound water filtration system. With the introduction of the Quadro System, the company has expanded on their patented Triflow technology — known for delivering hot, cold and filtered water through a dedicated waterway within one spout — and introduces the convenience factor with the addition of instant hot, filtered water heated to 98°C.

Through the use of a dedicated waterway for filtered water, the Quadro System addresses all safety concerns, with cross-contamination successfully prevented, the spout remains cool to the touch, and the safety feature ensures the hot filtered water is activated only with intent. The Quadro System comes in a range of cutting edge designs including two award-winning designs by Zaha Hadid.

Using the latest technology and specially developed software, the Triflow Quadro System ensures efficient water use and produces a constant, non-pressurized stream of hot or cold filtered water at the touch of a button. This means the hot water is not released as steam, thus reducing the risk of scalding, as well as saving energy.

With ever-increasing production and transportation costs associated with the consumption of disposable drinks bottles and landfills nearing maximum capacity, Triflow Concepts encourages a healthy and sustainable hydration solution that minimises carbon footprints and saves money.

Triflow Concepts' innovative products give consumers the opportunity to go Back to Tap without compromising on style, convenience or water quality. With the introduction of the Quadro System, consumers can now prepare great tasting hot drinks, blanch vegetables and cook with ease.

The high performance ceramic filter cartridges used in all Triflow products are developed and manufactured exclusively for Triflow Concepts in Switzerland. The filtration system leaves in beneficial minerals such as calcium, magnesium and fluoride, while eliminating harmful chemical and bacterial contaminants found in ordinary tap water.

In a bid to maximise the benefits of the Triflow Quadro System, Triflow has introduced the Triflask, a BSP-free, portable and sleek water flask that further eliminates the requirement of bottled water for individuals who are on the move or away from home. Available in a broad range of styles and colours, the Triflask and the Quadro System are destined to become the must-have accessory for the urban environmentalist looking for healthy hydration at home or on the go ■
