BRITISH DESIGN SPECIFICATION

TRIFLOW CONCEPTS

Renowned for its unrivalled innovation ethos and engineering excellence, Triflow Concepts continues to successfully integrate the functionality needs of the modern consumer while delivering an ecologically sound and attractive filter tap system. With the introduction of the Quadro System, Triflow Concepts expands on its patented Triflow technology - known for delivering hot, cold and filtered water through a dedicated waterway within one spout - and introduces the convenience factor with the addition of instant hot, filtered water heated to 98°C.

Through the use of a dedicated waterway for filtered water, the Quadro System addresses all safety concerns: cross-contamination is successfully avoided, the spout remains cool to the touch, and the safety feature ensures that hot filtered water is activated only with intent. The Quadro System comes in range of cutting edge designs including two award-winning models by Zaha Hadid.

Using the latest technology and specially developed software, the Triflow Quadro System ensures efficient water use and produces a constant, non-pressurized stream of hot or cold filtered water at the touch of a button. This means the hot water is not released as steam, thus reducing the risk of scalding, and saving energy.

SPECIFICATIONS

- Hot, cold and filtered cold and instant hot water heated to 98°, all from a single appliance
- Innovative designs, including models by Zaha Hadid
- Swiss filter cartridge removes chemical and bacterial contaminants
- Beneficial minerals such as calcium, magnesium and fluoride are not removed
- 100% British design and engineering excellence
