Pioneering water flow

With the introduction of the Triflow Quadro System, Triflow Concepts expands on its patented technology – known for delivering hot, cold and filtered water through a dedicated waterway in a single spout – and adds the convenience of instant hot, filtered water heated to 98°C. The ceramic filter incorporated in the Triflow System is one of the highest performing filters available in the market today and is made by Swiss manufacturer Katadyn. The cartridge is made from sintered diatomaceous earth and has a micro porous structure impregnated with silver which is known for its bactericidal action. The pore size is able to eliminate particles as small as 0.2 microns. Through the use of a separate waterway for filtered water, the Triflow Quadro System addresses safety concerns: cross-contamination is successfully blocked, the spout remains cool to the touch, and a child safety feature ensures that hot filtered water is only activated with

intent. The Quadro System is available in the Triflow Concepts original range as well as a number of cutting-edge designs, including award-winning Zaha Hadid models. For clients eager to help improve the environment, and to reduce their carbon footprint, the Quadro System makes switching from bottled to tap water easy. Triflow Concepts' patented tap technology and exclusive filter system enable consumers to go Back to Tap without compromising style, convenience or water quality.

Enhanced Liberty Collection

For 2011, Italian mosaic tile maker Trend has enriched its top-line Liberty collection with 10 sumptuous new colours, all handcrafted from stained glass and featuring the signature chromatic and iridescent textures of this exclusive design. Composed of hand-cut tesserae in a variety of compatible shapes, Liberty reinterprets glass mosaic design by presenting a selection of different tile shades and sizes, with both straight and sinuous lines, so that the reflective light of the material is the predominant decorative element. Trend GB is now looking to recruit additional stockists in selected postcode territories, as well as enlisting architects, interior designers and other mosaic tile specifiers. The company is offering a deluxe Liberty sample box and a lavish 50-page brochure FOC to appointed Trend stockists and specifiers, enabling them to capitalise upon interest in the newly enlarged collection. For further information telephone 01892 509690, email info@trend-gb.com or visit <http://www.trend-vi.com/en>

From trunk to tread

Bolefloor introduces an industrial-scale manufactured hardwood flooring with naturally curved lengths that follow a tree's natural growth. Bolefloor has chosen DOMOTEX as its first step to show its product to the world. The soft lines of the floors are a totally new design and manufacturing concept in the market. Just as no two trees are identical, no two Bolefloors are alike. Until now, unique surfaces like these have been the province of just a few dedicated craftsmen. With Bolefloors, all that is changed. The innovative technology combines scanning system for naturally curved boards, custom-made algorithms, which optimize the cut, and floor surface design software developed by a Finnish engineering automation company and three software companies in cooperation with the Institute of Cybernetics at Tallinn University of Technology. Bolefloor offers a new ecological approach to the flooring business. The timber usage efficiency is significantly higher than straight-board solid floors, resulting in more floors per harvested forest. For further information visit www.bolefloor.com

Redefining modular upholstery systems

Haven is a very contemporary and comfortable modular seating system with wide-ranging functionality and appeal. It works on two levels, as a combination of pieces to create waiting, informal working or relaxing environments, or as individual pieces in the

form of sofas, chairs and tables. Across these levels it will work equally well in large or small corporate atria, executive or hotel lounges, VIP airport lounges, informal meeting areas and general breakout spaces. Redefining the modular upholstery system with sofas, stools, tables and screens, the supporting elements give you a complete working solution. For further information visit www.allemuir.com
